# LEVERAGING DPI FRAMEWORK FOR E-MOBILITY

*A DIGITAL COMMON FOR PUBLIC MOBILITY*

CONVENTION HALL 2 | 26 OCTOBER

**17<sup>th</sup>**  Urban Mobility India  
Conference & Expo 2024  
Standardization and Optimization  
of Urban Transport Solutions

# PUBLIC TRANSPORT IN INDIA

Buses are the primary form of public transportation in India

- 90% of road-based passengers in India rely on buses for transportation
- 399 million passengers travel by bus every day
- With ~2 million buses on the roads, India has the third-largest bus fleet in the world, after Indonesia and China.
- Share of Public Buses - 7%

# PUBLIC TRANSPORT IN INDIA

## PROBLEM

Fragmented ecosystem with small players -  
limiting opportunities for efficiencies and  
scalability

*90% of the bus operators in India own less than 5 buses*

# INDIA ELECTRIC BUS STORY

800,000 e-Buses target in the next 10 years

**100x** growth demands a collaborative ecosystem:

**Scale of Operations:** Mobility and energy infrastructure at scale needs streamlined management and communication.

**Investment and Innovation:** Partnerships to leverage private sector strengths in financing and efficiency.

**Broader Engagement:** Collaboration for sustainable growth with diverse stakeholders.

# INDIA ELECTRIC BUS STORY

## CHALLENGE

A decentralized approach leveraging technology with broader stakeholder involvement is needed

# WHY NOW?

## FOR BUS + INFRA

- 75% of India's buses reach end-of-life in 3-5 years - **key opportunity for electric replacements**
- **Demand aggregation** has already demonstrated cost parity with ICE counterparts
- **Government initiatives** for electric buses — to cut emissions and meet India's commitments

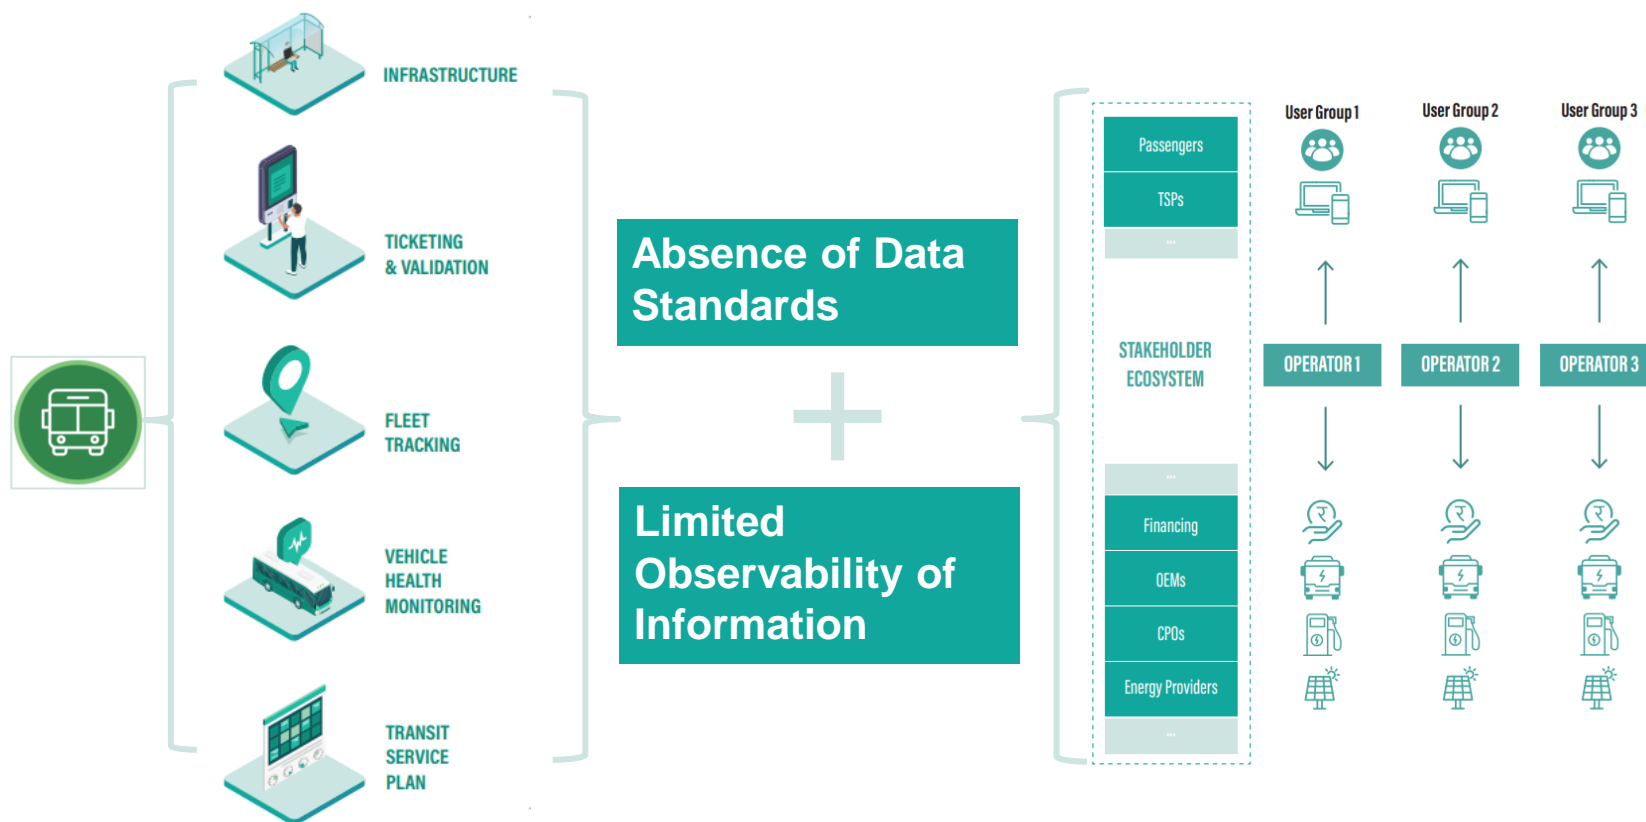

## FOR IT-in-PT

- MoHUA and MoRTH independently implementing **ITMS solutions nationwide**, across cities and STUs
- Shift to service-based models demands **transparent data exchange** for stakeholders
- Limited technology providers offering **non-interoperable solutions**

## OPPORTUNITY

To reimagine the bus sector as a connected, low-cost technology-driven ecosystem

# CURRENT TECHNOLOGY GAP

**Limited Bus Discovery and Utilization:** Over ₹1,000 crore spent on ITS for public buses, with little value added and unreliable operational data capture

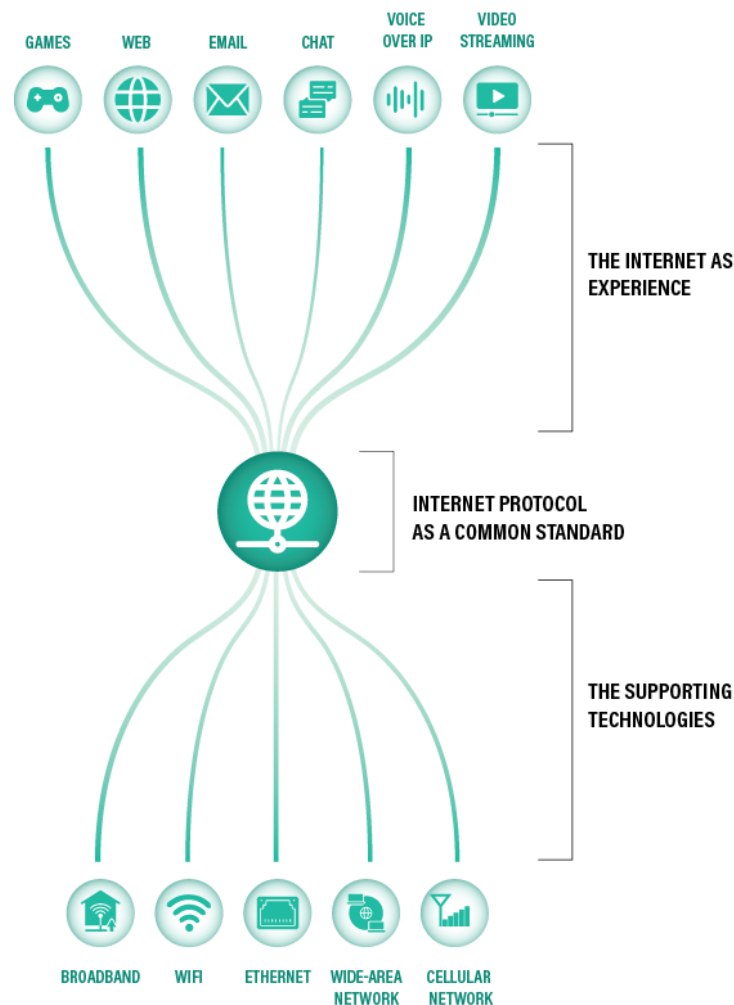

# RETHINKING ABOUT TECHNOLOGY

## THE DPI THINKING

### HOURLASS DESIGN

Achieving more with less

- Illustrates minimalist technology interventions, as seen with the internet's design.
- At its core – internet protocol serves as a universal intermediary.
- Enables seamless communication across networks.

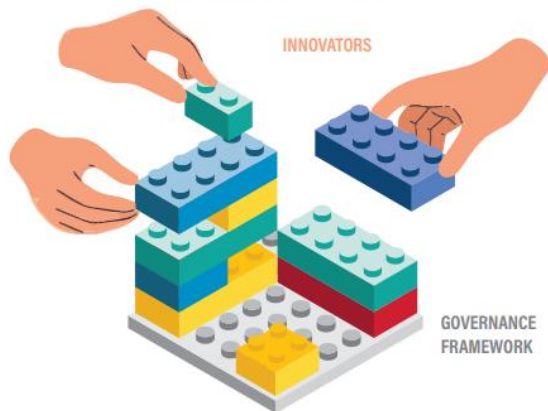

# REUSEABLE BUILDING BLOCKS

## THE DPI THINKING

INNOVATORS BUILD SOLUTIONS WITH THE BLOCKS UPON A SOLID FOUNDATION LAID BY GOVERNANCE FRAMEWORKS

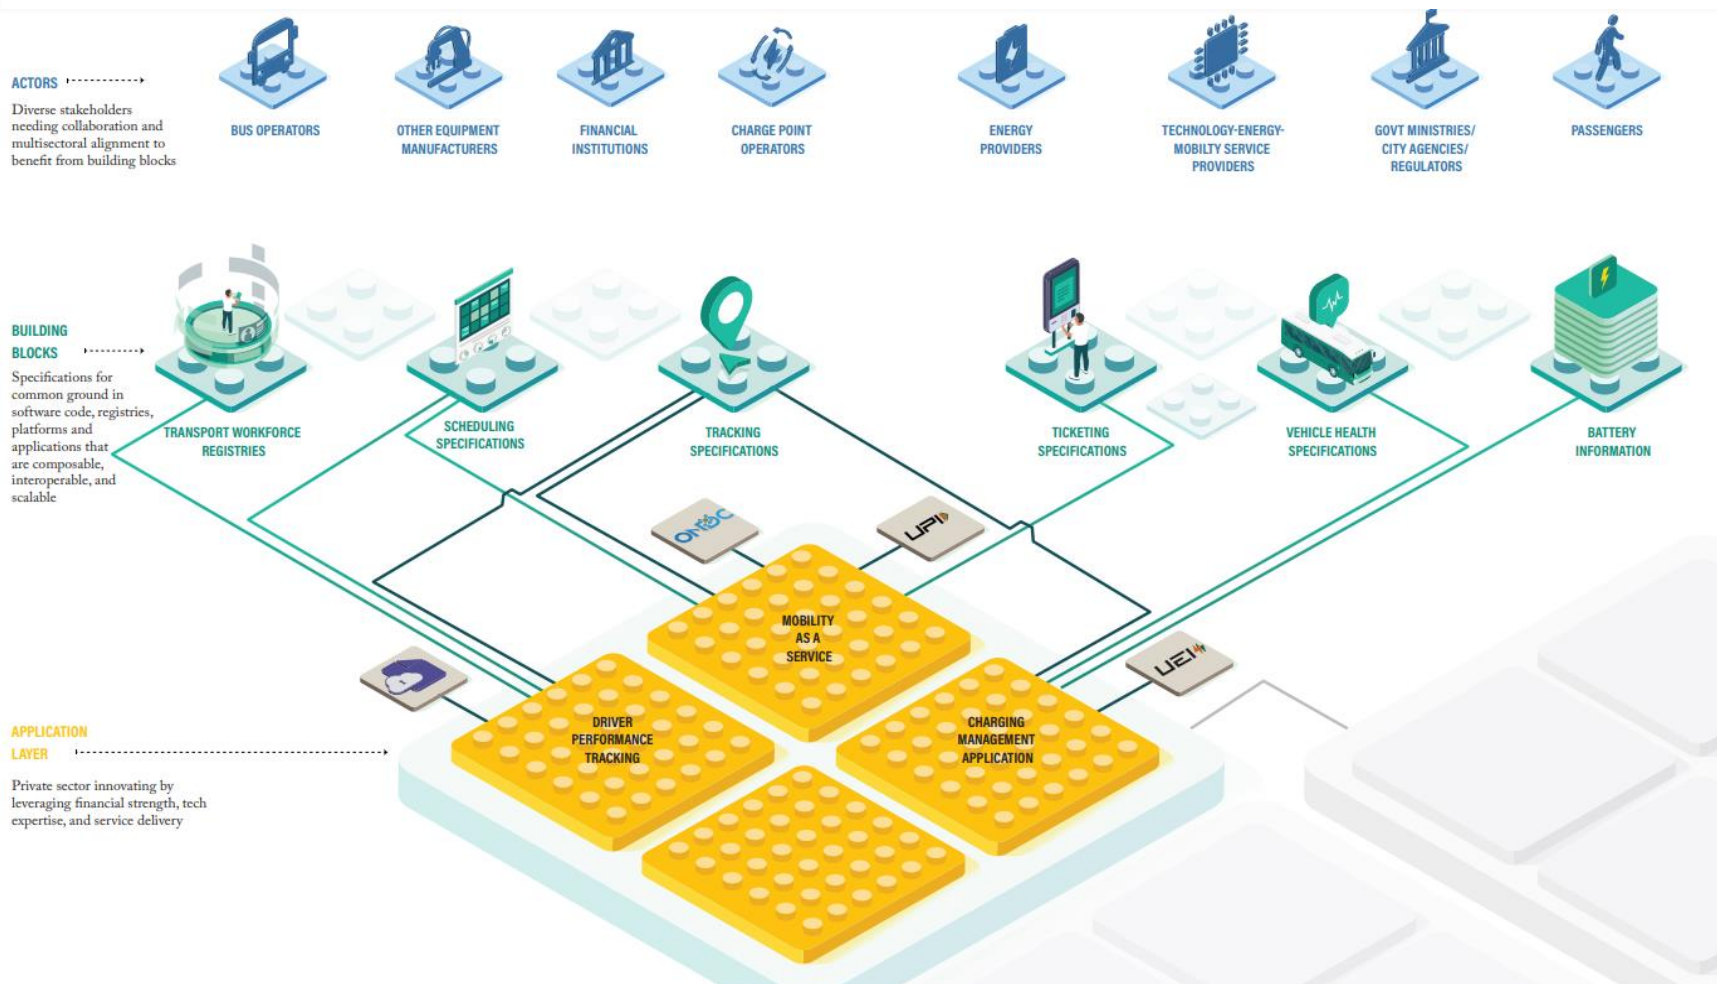

### REIMAGINING INDIA'S BUS ECOSYSTEM WITH THE DPI MODEL

All the building blocks (like vehicle health, battery information) fit together seamlessly, empowering innovators to build scalable solutions

# OPEN E-BUS BLUEPRINT

# OPEN E-BUS BLUEPRINT

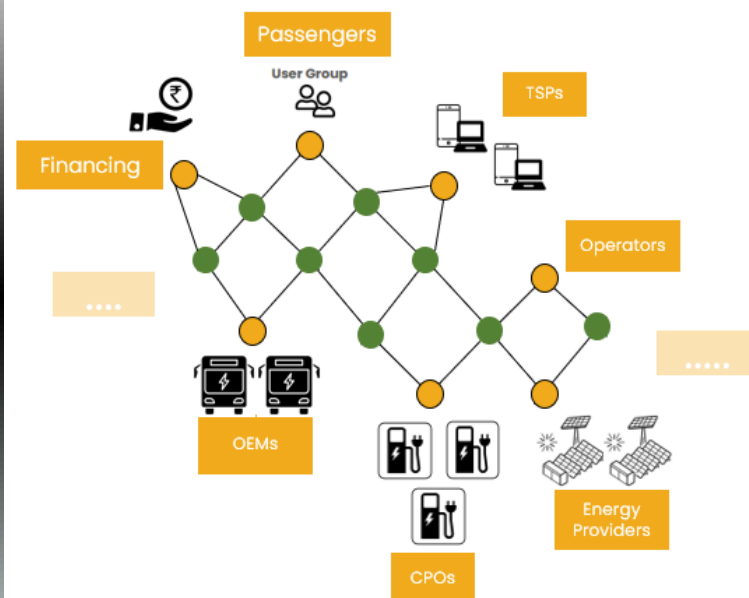

## INTEGRATES

- Technology architecture (observability)
- Governance (standards and specifications)
- Market-driven innovation

## KEY BENEFITS

- Shift from technology to foundational digital building blocks in bus transport for scalable solutions
- Empower innovators to create cost effective and market driven tools for deploying the e-bus infrastructure
- Enable multi-sectoral stakeholders to contribute and benefit from the e-bus transition

## UNIFIED LANDSCAPE FOR BUSES

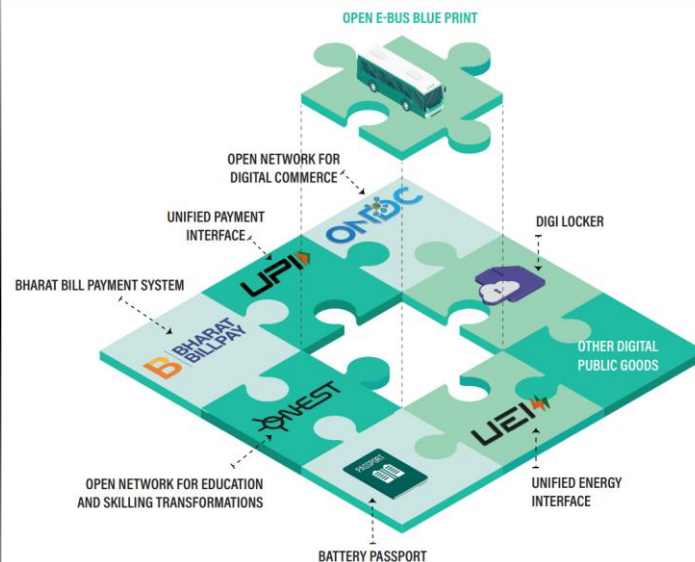

# OPEN E-BUS BLUEPRINT- USE CASES

- Operational data empowers CPOs
- Sustainable battery management and circular economy
- Powering Workforce: E-buses, skills, and the future
- Public-Transport-as-a-Service independent of ownership
- Mobilizing Green Finance

## PARADIGM SHIFT

- Encouraging widespread participation – in value creation
- Enabling flow of value than the store of value
- Addressing discoverability and trust, agnostic of a platform and across platforms

## DPI FOR BUS ECOSYSTEM

# THANK YOU

CONVENTION HALL 2 | 26 OCTOBER
