NEW DELHI RAILWAY STATION CHARACTERISTICS

LEVEL OF SERVICE ASSESSMENT

ALTERNATE STRATEGIES FOR STATION PRODUCTIVITY IMPROVEMENT

SUMMING UP

INTRODUCTION

BACKGROUND

- ❑ Railways Stations are the **important component** in regional and city's transport system.
- ❑ Railway Stations are the **gateway into the towns** along with focal point of economic and social activities.
- ❑ Station's design reflects the **culture, historical background and lifestyle** of the people of that city / region.

Kings Cross Station, London, UK

Kuala Lumpur Railway Station, Malaysia

INDIAN RAILWAYS

- ❑ Caters over **800 cr passengers** and nearly **1 cr tonnes of freight** annually.
- ❑ World's largest railway networks comprising **65,808 km** length of route network and **7,112 stations** as on March 2014.
- ❑ World's 7th largest commercial or utility employer, with over **1.376 million employees** as on 2013.

INTRODUCTION

RESEARCH NEED

- ❑ Railway station **productivity assessment is critical** in improving facilities for users as well as in operations.
- ❑ Shabby and **least concerned infrastructure of Railway stations** and terminals in India.
- ❑ **Station facility audit** has been neglected. Station facilities are obsolete and needs to be upgraded.
- ❑ Most of the efforts in Indian railways are targeted towards running more trains to cater increasing demand but **improving station's environment** to cater that much of demand **is completely neglected**.
- ❑ **NTDPC report** have clearly mentioned that passenger services provided by Indian Railways are low to medium level of service & comfort with poor facilities as well as poor upkeep of stations and **recommends to redevelop stations for smooth flow and comfortable experience of passengers** as also to ensure clean and hygienic environment.

INTRODUCTION

AIM

To assess the performance of Railway Stations in India and evolve alternate strategies for its improvement.

OBJECTIVES

- ❑ To understand the concept, components and planning norms of Railway Stations and its planning;
- ❑ To review approaches for measuring performance of passenger terminals and stations;
- ❑ To review global best practices for Station planning and identify performance benchmarks;
- ❑ To assess the physical and operational characteristics of Railway Stations and their relation with the station performance;
- ❑ To identify the gaps in station planning parameters and evolve/recommend appropriate planning guidelines

LITERATURE REVIEW

FUNCTIONAL AREAS OF RAILWAY STATION

Core Area

- Focuses on processing passengers
 - Ticketing
 - Information
 - Waiting
 - Restrooms

Transition Area

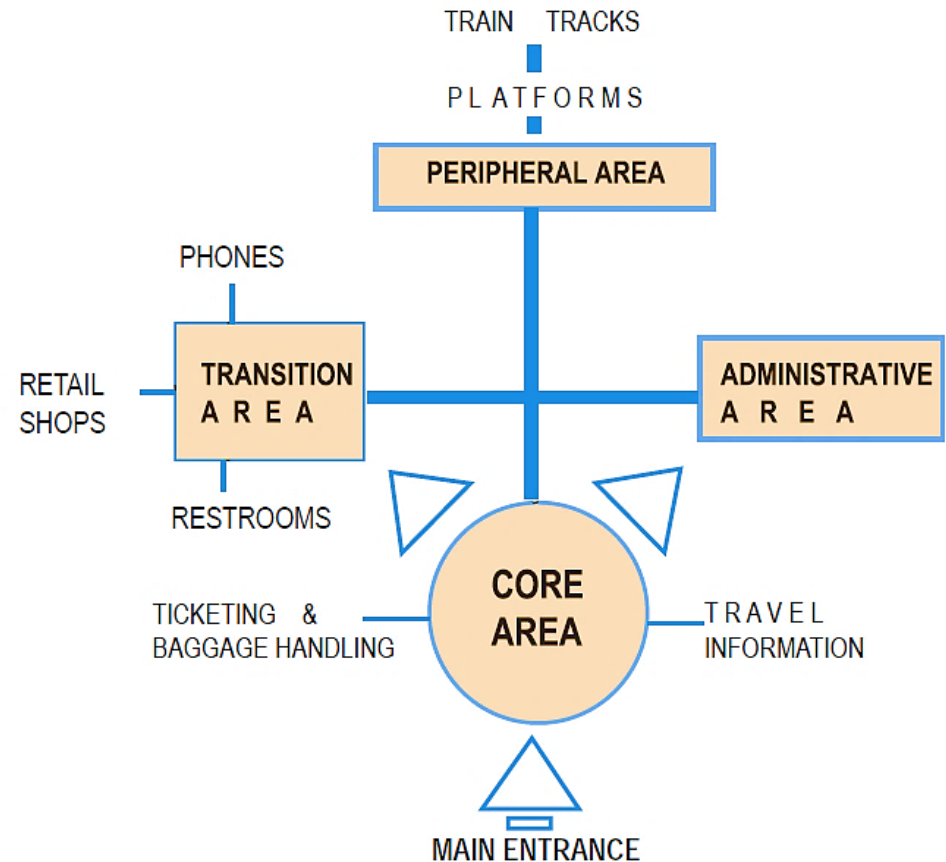

- Connect transit facilities in the core areas to the transportation modes
 - Telephones
 - Commercial Spaces

Peripheral Area

- Support circulation outside the main building
 - Platforms, Tracks
 - Vehicle service spaces

Administrative Area

- Control both traffic and station management

Flow diagram of functional elements within railway stations

LITERATURE REVIEW

FUNCTIONAL AREAS OF RAILWAY STATION

Area/Users	Activities	Requirements
<p>Core ↓ Passengers Visitors Staff</p>	<ul style="list-style-type: none"> Departure <ul style="list-style-type: none"> - Ticket Schedule Check - Ticket Booking - Baggage Handling - Fare Collection - Gate Check-in - Security Check - Waiting Arrivals <ul style="list-style-type: none"> - Meeting & Greeting - Reclaiming Baggage - Gate Check-out 	<ul style="list-style-type: none"> Entry <ul style="list-style-type: none"> - Security Check Concourse <ul style="list-style-type: none"> - Info Kiosks / Help Desks - Signage's / Display Boards - Ticket Counters w/ w/o Baggage Check-ins / Ticket Vending Machines - Snack Bars / Book Stalls / AVMs Peripheral Area Entry Gate <ul style="list-style-type: none"> - Automated Ticket Collectors / Staff - Waiting Area / Seating - Baggage Screening Devices Peripheral Area Exit Gate <ul style="list-style-type: none"> - Meeting Point / Waiting Area / Seating - Baggage Reclaim / Holding

LITERATURE REVIEW

TYPE OF STATIONS

Line Stations	Terminal Stations
Transfer Stations	Inter-modal Stations

STATION COMPONENTS

The general sequence of the component spaces follows the customer's path: entry, through the control area, to the platform, and onto the train.

Entrance/Exit – Unpaid Area – Paid Area - Platform

CATEGORIES OF STATIONS FOR PROVISION OF PASSENGER AMENITIES

S.No.	Category	Criteria
1.	A1	Non-Suburban stations with an annual passenger earning of more than Rs. 50 cr
2.	A	Non-Suburban stations with an annual passenger earning of Rs. 6 cr and upto Rs. 50 cr
3.	B	I. Non-Suburban stations with an annual passenger earnings between Rs. 3 cr to Rs. 6 cr II. Stations of tourist importance, or an important junction station (to be decided by G.M.)
4.	C	All Suburban stations
5.	D	Non-Suburban stations with passenger earnings between Rs. 1 cr and Rs. 3 cr
6.	E	Non-Suburban stations with passenger earnings less than Rs. 1 cr
7.	F	Halts

LITERATURE REVIEW

PLANNING AND DESIGN PRINCIPLES

Objective: Maximum Passenger Convenience with **Fast and Efficient Passenger Flow**

Design Approach and Hierarchy: should be done from whole to part:

- ❑ **Primary Order:** Describes the **creation of Station volumes** through large scale engineering. Yard alignment, no. & size of platform, size & location of concourses etc.
- ❑ **Secondary Order:** Building Components, such as detailing of concourse space, facilities of passengers, operational offices, staircases, escalators, elevators, passageway, entry, exit, roof, ceilings, walls etc.
- ❑ **Tertiary Order:** Passenger Information System, Seating, Lighting etc.

PLANNING NORMS & STANDARDS

- ❑ **Local city developmental bye-laws and master plan** shall be followed in designing the capacity of infrastructure facilities, such as building design.
- ❑ Other Codes or specifications in order of priority:
 - National Building Code (**NBC**) & **IRC** Codes,
 - Bureau of Indian Standards (**BIS**),
 - American, British and International Standards,
 - Any other.

LITERATURE REVIEW

KEY PERFORMANCE INDICATORS (KPI)

- ❑ To calculate productivity of any Station / terminal in terms of its **Physical and Operational characteristics** in the most relevant Quantitative method is by **assessing the Level of Service (LOS)**, from part to whole.
- ❑ Also, according to Indian Railway manual 2009, Creation of Station Volumes by means of **number & size of platforms, size & location of concourse** etc. is the primary order for station planning & design, to fulfill their objective of **Maximum Passenger Convenience with Fast and Efficient Passenger Flow**
- ❑ **Identified Key Performance Indicators:**
 - Dwell Time
 - Level of Service (LOS)
 - Average Passenger Space (m^2/pax)
 - Flow Rate ($\text{pax}/\text{m}/\text{min}$)

DWELL TIME

- It is the Average Time a person is in a space or Process (Avg. time spent/pax.)
- As people move faster - Dwell time is shorter

LITERATURE REVIEW

LEVEL OF SERVICE (LOS)

Indian Railways follows “**J.J. Fruin’s LOS Performance Standards**”

Allocated Space per Person in the Terminal Area

Terminal Area	Allocated Space (m ² /passenger)					
LOS	A	B	C	D	E	F
Check-in Queue	1.71	1.53	1.35	1.17	0.99	System Breakdown
Wait / Circulate	2.61	2.25	1.8	1.44	0.99	
Hold Room	1.35	1.17	0.99	0.81	0.54	

Source: Indian Railway Manual for Standards and Specifications for Railway Stations (June 2009)

Average Flow LOS criteria for Walkway

LOS	Average Space (m ² /p)	Flow Rate (p/min/m)
A	> 5.6	0 – 16
B	3.7 – 5.6	16 – 23
C	2.2 – 3.7	23 – 32
D	1.4 – 2.2	32 – 48
E	0.7 – 1.4	48 – 74
F	< 0.7	Variable

Source: Highway Capacity Manual (HCM) 2010

LOS criteria for Staircase

LOS	Average Space (m ² /p)	Flow Rate (p/min/m)
A	> 1.9	< 16
B	1.6 – 1.9	16 – 20
C	1.1 – 1.6	20 – 26
D	0.8 – 1.1	26 – 36
E	0.5 – 0.8	36 – 48
F	< 0.5	Variable

Source: Highway Capacity Manual (HCM) 2010

- ❖ According to Indian Railway Manual, LOS C shall be maintained, whereas in seasonal peak LOS D is tolerable.

LITERATURE REVIEW

OVERVIEW OF RAILWAY STATIONS OF UNITED KINGDOM AND INDIA

Overview of selected Railway Stations of United Kingdom

	London King's Cross Railway Station	London Waterloo station	London Victoria Station
Opened in	1852	July 1848	1 October 1860
Station Area (Ha.)	4.2	3.0	3.0
Footfalls/yr. (2014)	91.98 million	91.49 million	86.73 million
Avg. Daily Footfalls	2,52,000	2,50,000	2,38,000
Pax. Handled /Ha./day	60,000	83,000	80,000
No. of Platforms	12 platforms	22 platforms	19 platforms

European Railway Stations
are handling
74,000 passengers/Ha/day

PRIMARY DATA

1. Station Facility Audit Survey

Objective : To cross-check the availability of **passenger's amenities** in the railway station as per the standards of Indian Railway Manual.

2. Station User Opinion Survey – 250 Samples

Objective : To comprehend the **user's outlook (satisfaction level) on the activities / components** of the railway station for further detailed surveys and analysis.

3. Station User Characteristics Survey – 250 Samples

Objective : To analyse **user's characteristics**:

- Dwell Time of each movement and activity
- Profession,
- Income level,
- Time spent on the platforms or waiting lounge, and
- Luggage carried.

DATA BASE

PRIMARY DATA

4. Passengers Count Survey by Videography and Photography Approach

Survey done at Entries / Exits, Platforms, FOB, Staircase and Escalator.

- Objectives :
1. To estimate current **daily footfalls**.
 2. To analyze **Level of Service (LOS)** for pedestrian space, speed and flow at Platforms, Foot-over-Bridge (FOBs), Staircase and escalator.

CCTV footage collection details:-

- No. of Locations : 20
- Duration of videos : 40 hours in total
 (At each location: 2 hrs. – 1 morning peak & 1 evening peak hr.)
- Morning Peak hour : 9 am – 10 am
- Evening Peak hour : 5 pm – 6 pm
 (Peak hours considered from train running schedule)

Entry/Exit

Platform – empty track

Staircase & Platform

STUDY AREA

DELHI

- National Capital Territory (NCT) of Delhi, is the **capital territory** of India.
- It is bordered by **Haryana on three sides** and by **Uttar Pradesh to the east**.
- **Area** : about **1,484 Km²** (573 sq mi).
- **Population** : about **16.3 million**

Transport Sector in Delhi

ROAD – Delhi has the highest road density of 2103 km/100 Km² in India.

RAIL – In the NCT of Delhi both **inter-city** & **intra-city passenger** movements are being catered to by the existing rail network comprising the **Regional** & **Ring Rail Systems** respectively.

Railway Development in Delhi

- Delhi division falls under **Northern Railways**.
- Approximate track kilometer- **2,875 km**.
- Division runs **582** Mail/Express & Passenger trains.
- Delhi has network of **35 stations**.

Delhi City Map with Railway Tracks

Delhi Junction (also Old Delhi Railway Station) came into existence **1864**

New Delhi Railway Station became operational **1931**

1978 Hazrat Nizamuddin Railway Station became operational

2009 Anand Vihar Railway Terminal was redeveloped as a Directional Terminal

STUDY AREA

RAILWAY STATIONS IN DELHI

S. No.	Station Name	No. of Trains per Day	Avg No. of Daily Footfalls (Approx.)	Avg no. of pax./train

DAILY FOOTFALLS ESTIMATION

- Using **videography method**
- Head-counts** at all 8 Entry/Exit Points
- Location: 4 points at Paharganj & 4 points at Ajmeri Gate side in peak hours
- Peak Hours : **9 am to 10 am** (Morning)
: **5 pm to 6 pm** (Evening)

NDLS Conceptual Block Diagram with Survey Locations

STATION USERS PEAK HOUR VOLUME (Morning & Evening Average Peak Hour Head Counts)

Paharganj Side (Passengers Count)			Total
ENTRY/EXIT NO.	ENTRY	EXIT	
1	1899	1078	2977
2	1204	1399	2603
3	1379	1542	2921
4	2163	3550	5713
Total	6645	7569	14214
% Share	47%	53%	
Ajmeri Gate Side (Passengers Count)			Total
ENTRY/EXIT NO.	ENTRY	EXIT	
1	14	2815	2829
2	7337	4536	11873
3	3129	1751	4880
4	1276	896	2172
Total	11756	9998	21754
% Share	54%	46%	

Total Peak Hour Footfalls: **35968** passengers approx.

OPERATIONAL CHARACTERISTICS - NDLS

DAILY FOOTFALLS ESTIMATION

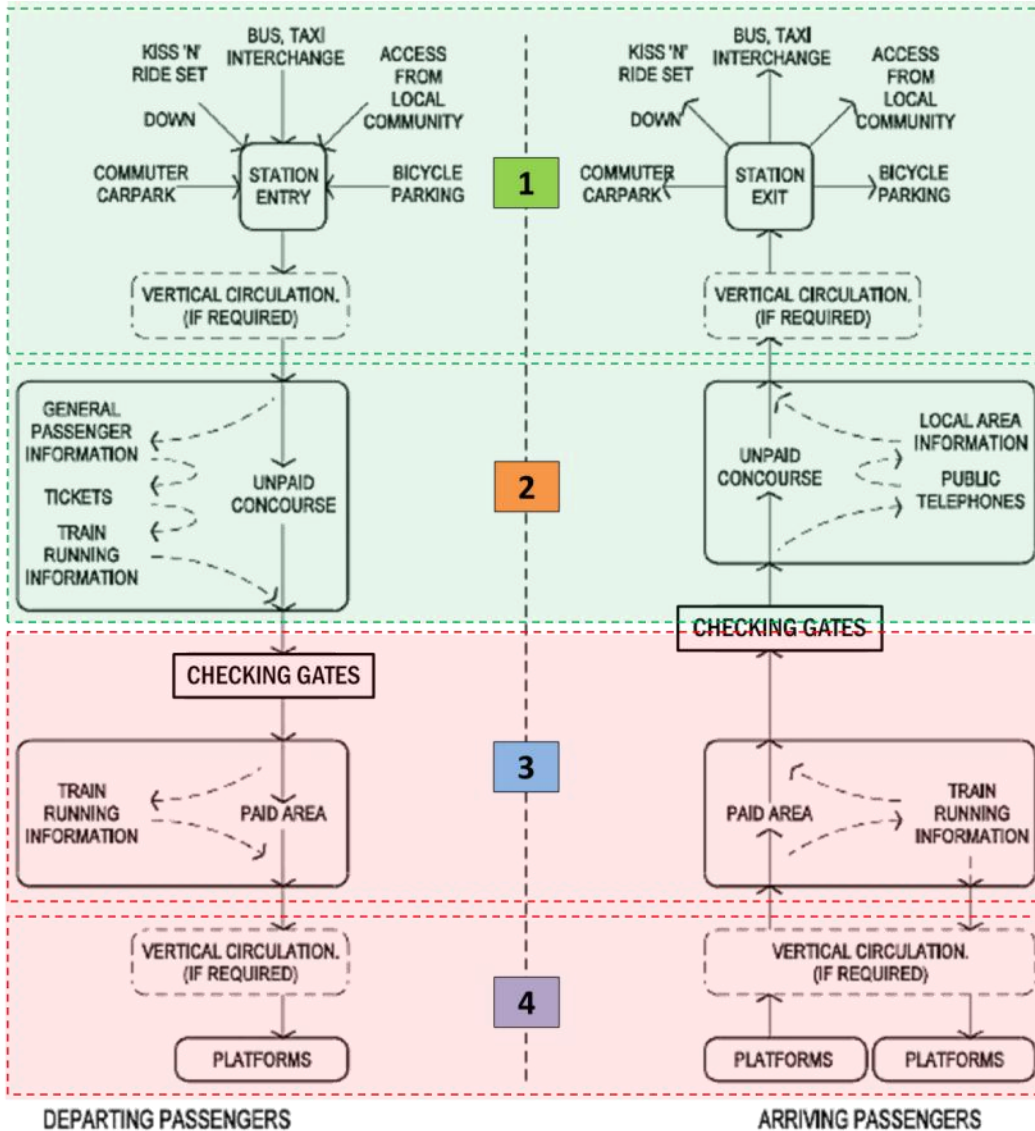

STATION USERS VOLUME PER DAY

Both Directions (24 Hours Footfalls by taking 7.45% as Peak Hour Factor)				
DIRECTIONS	ENTRY	EXIT	TOTAL	Directional Distribution
Paharganj	89,200	1,01,600	1,90,800	40 %
Ajmeri Gate	1,57,800	1,34,200	2,92,000	60 %
	2,47,000	2,35,800	4,82,800	100 %

- ❑ Peak Hour Factor has been taken as **7.45 % of 24 hours footfalls** (taken from previous report prepared by consultants in year 2008)
- ❑ **4,82,800 approx. daily footfalls** in the Station premises.
- ❑ **60 % passenger** footfalls at **Ajmeri Gate** side, because of:
 - Availability of PT like **bus service & metro**,
 - **Multilevel car parking** etc.
 - Lower Congestion level as compare to Paharganj.

Signage at FOBs

Entry towards FOBs for Platforms

OPERATIONAL CHARACTERISTICS - NDLS

DWELL TIME

Noting time spent by each person (250 random samples) in each activity or process and taken average for three types of passenger.

Average Dwell Time

Station Component		Unreserved Departing Passenger (in Minutes)	Reserved Departing Passenger (in Minutes)	Arriving Passenger (in Minutes)
City - Side Peripheral Area		6	6	4
Core Area		5	1	0
Administrative & Transit Area		1	1	1
Track - Side Peripheral Area	Circulation	4	4	4
	Waiting at Platform	30	25	5
Total		46	37	14

- **65 - 68 % Average Dwell Time** is spent in **Track-side Peripheral Area** i.e. Platforms and their approach (includes vertical movement through Stairs / Elevators / Escalators) by Departing Passengers.
- Followed by **City-side Peripheral area** with **13 – 28 % Average Dwell Time** spent by passengers.

OPERATIONAL CHARACTERISTICS - NDLS

PASSENGER (USER) RATINGS FOR EACH ACTIVITY

S. No.	Activity	Area Type	Rating (in %)					Passenger's Comments
			V G	G	A	P	V P	
1	Ticket Purchase and Enquiry	Core	24	18	38	14	6	-- Inadequate management
2	Retailing	Transit	32	40	22	4	2	
3	Vending (machines)	Core	10	14	12	22	42	-- Cannot find TVMs & high % of illiteracy
4	Provision of information to passengers for their rail and / or onward journeys	Core	56	14	22	2	6	
5	Passage through any gate-line	Core	10	40	36	2	12	
6	Way-finding (signage)	All Areas	8	8	36	22	26	-- Symbols / Icons are not drawn
7	Access to and from platforms	Peripheral (Track)	14	12	32	20	22	-- Absence of Escalators -- Passengers used to sit on Stairs
8	Waiting for trains	Peripheral (Track) & Transit	6	14	22	28	30	-- Very less of benches and chairs to sit -- No provision for luggage handling
9	Boarding and alighting from trains	Peripheral (Track)	10	12	26	20	32	-- Cross movement of boarding & alighting passengers
10	Accessing other modes of transport	Peripheral (City)	38	22	24	6	10	

- Passengers / Users not satisfied with track-side Peripheral Area.

Track-Side Peripheral Areas i.e. Platforms & Vertical Circulation are getting **primary concern** from User perspective as well as according to Indian Railway Manual for better Planning & Design for Productivity Improvements.

Rating:- VG – Very Good
G – Good
A – Average
P – Poor
VP – Very Poor

PASSENGER CHARACTERISTICS - NDLS

TIME SPENT BY USERS AT PLATFORMS / WAITING AREAS

Distribution of Passengers by Time Spent

Time Spent by Passengers		
Time spent (in min.)	Percentage	Cumulative %age
0-10 (<10)	6	100
10-20 (<20)	22	94
20-30 (<30)	24	72
30-45 (<45)	17	48
45-60 (<60)	16	31
> 60	15	15

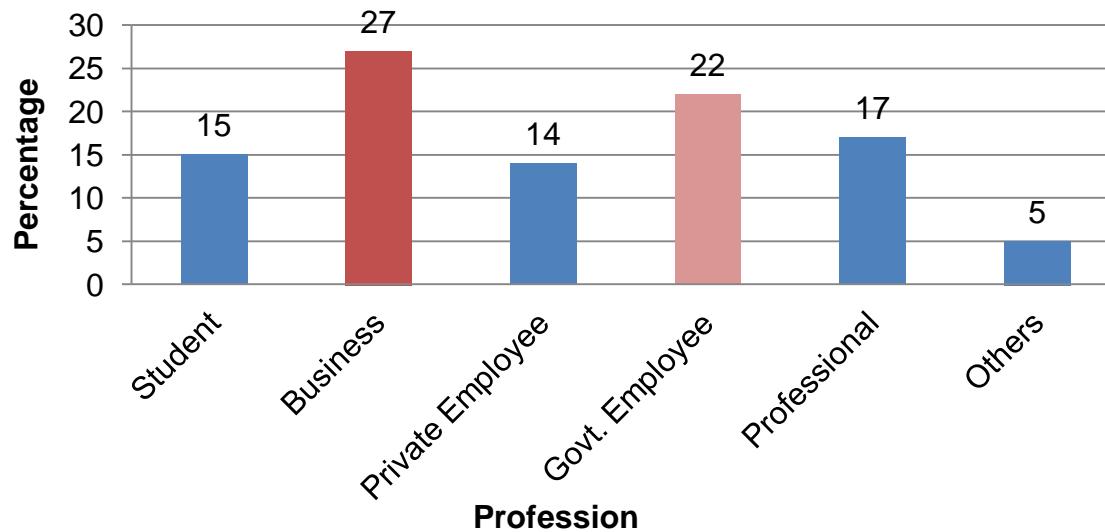

❑ Most of the passengers are spending **20-30 min.** at station

PASSENGER CHARACTERISTICS - NDLS

PROFESSION

Distribution of Passengers by Profession

Profession of Passengers	
Profession	Percentage
Student	15
Business	27
Private Employee	14
Govt. Employee	22
Professional	17
Others	5

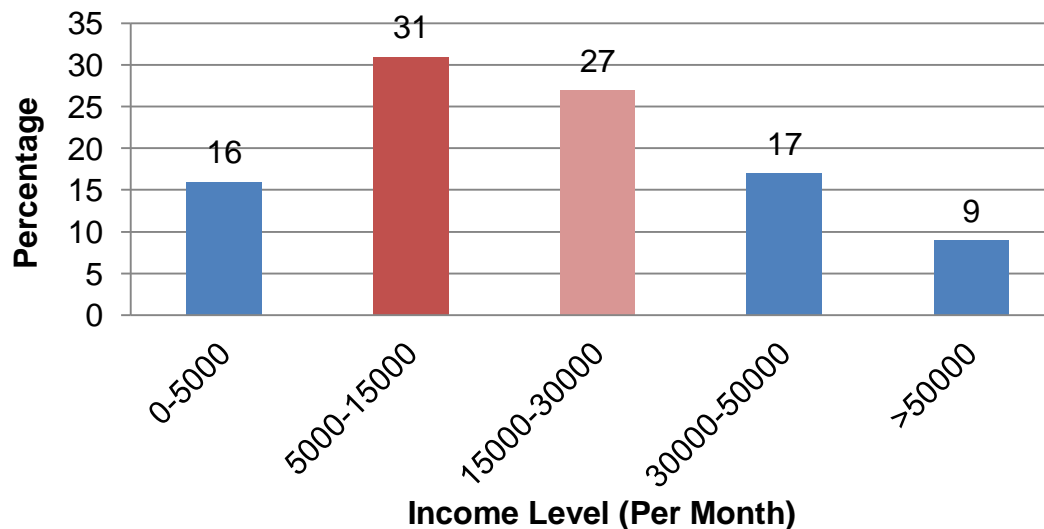

❑ **27 % are Business People & 22 % Govt. Employees**

PASSENGER CHARACTERISTICS - NDLS

INCOME LEVELS (PER MONTH)

Distribution of Passengers by Monthly Income

Per Month Income Level of Passengers	
Income Group	Percentage
0 – 5000	16
5000 – 15000	31
15000 – 30000	27
30000 – 50000	17
> 50000	9

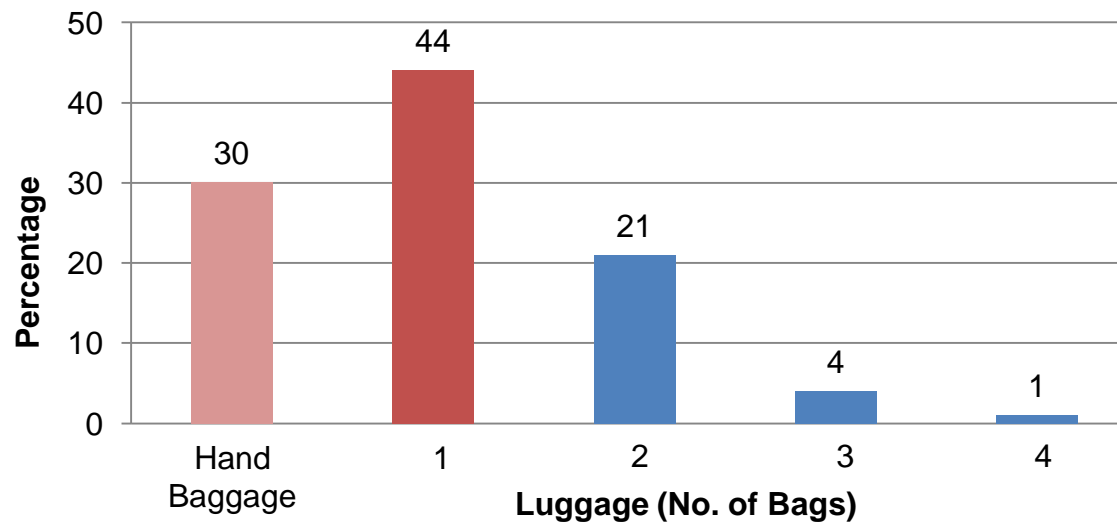

❑ **31 % of the station users earn between Rs. 5000 to Rs. 15000**

PASSENGER CHARACTERISTICS - NDLS

LUGAGGE

Distribution of Passengers by Monthly Income

Luggage Carrying Characteristics	
Luggage	Percentage
Hand Baggage	30
1	44
2	21
3	4
4	1

❑ 44 % passengers are carrying **one bag** as their luggage.

PASSENGER CHARACTERISTICS - NDLS

LUGAGGE

- ❑ Average number of baggage carried by per passenger = **1.02** (approx. **1 bag / person**) excluding hand bags.
- ❑ Observed that “space occupied by one bag is equal to space occupied by one passenger”.
- ❑ Baggage impact for LOS calculations – **one passenger has to be consider as occupying space of two person.**

LEVEL OF SERVICE ASSESSMENT

WALKWAY / FOOT-OVER-BRIDGE (FOB)

Commuter Behavior at Foot-over-Bridge (FOB)

TOTAL

No. of Commuters	51	49	47	51	61	69	79	89	140
FOB Length (m)	30	20	25	25	20	20	27	23	190
Commuter Meters	1530	980	1175	1275	1220	1380	2133	2047	11740

Average length covered per commuter (on FOB) = $11740 / 140 = 84$ m & Average time spent per commuter (on FOB) = $84 / 42 = 2$ min.

Level of Service (LOS) Assessment for Foot-over-Bridge (FOB)

AVERAGE

Speed (m/min)	48	42	48	48	42	36	36	36	42
Flow (p/m/min)*	25	23	21	20	20	21	26	30	23
Space (m ² /pax)*	1.9	1.8	2.3	2.4	2.1	1.7	1.4	1.2	2.1
LOS	D	D	C	C	D	D	D	E	D

*Luggage impact has been considered

LEVEL OF SERVICE ASSESSMENT

STAIRWAYS AND ESCALATORS

Level of Service (LOS) Assessment for Stairways and Escalators

Service	Average Width (m)	Average Speed (m/min)	Average Flow Rate (p/min/m)*	Average Space (m ² /p)*	LOS
Staircase	3.5**	30	33	0.9	D
Escalators	1	39	30	1.3	C

* Luggage impact has been considered

** Reduced one meter width (0.5m on each edge) occupied by passengers sitting illegally – for LOS calculations.

Total Average Width of Staircase = 4.5 m

LEVEL OF SERVICE ASSESSMENT

TRAIN-TYPE-WISE LOS ASSESSMENT AT SIDE PLATFORM

Source: Primary Survey, 2016

Level of Service (LOS): Waiting at Platforms

Platform No. : 01 (Side Platform)

Train types covered: Shatabdi, Rajdhani & Express

Assumptions: 1 bag per passenger and each bag covering equal space as a passenger

- ❑ DATA BASE
- ❑ STUDY AREA
- ❑ NEW DELHI RAILWAY STATION CHARACTERISTICS
- ❑ LEVEL OF SERVICE ASSESSMENT
- ❑ **ALTERNATE STRATEGIES FOR STATION PRODUCTIVITY IMPROVEMENT**
- ❑ SUMMING UP

ALTERNATE STRATEGIES

STRATEGY 1 – STAGGERING OF TRAINS SCHEDULE (Immediate Action)

Limitations:

- Trains can be staggered only within their own directional platform groups
 - Platform No. 1-4 : North Bound Trains
 - Platform No. 5-11 : Passing Trains
 - Platform No. 12-16 : East & South Bound Trains
- Only **Short Distance** (around **700 Km radius**) **trains** can be shifted into the early **morning slot of 1am - 5am**, rest of the trains can be only flipped on other platforms without any change in timings.

Example of Staggering

Case 1: Change in train time, no change in PF No:

- PF No. 9, Shatabdi Train Departure Time 6:10

Present LOS:

- Staggering train departure time to 5:10

New LOS:

❖ LOS above C reduced by **40 min.**

Case 2: Change in PF No., no change in Train Time:

- PF No. 14, EMU Train Time 9:00 – 9:02

Present LOS:

- Staggering train schedule from PF 14 to PF 15

New LOS:

❖ LOS above C gets reduced by **30 min.**

ALTERNATE STRATEGIES

STRATEGY 1 – STAGGERING OF TRAINS SCHEDULE (Immediate Action)

Evaluation Criteria:

1. Considering only North Bound Trains i.e. Platform Number 1 – 4
2. Shifting 6 Shatabdi Trains into early morning slot of 1am – 5am
3. Flipping scheduled platform to another available Platform for 2 EMU Trains

EXISTING Platform-wise LOS

		Time (in Hours)																								Coach Capacity	No. of Trains operated per day	LOS above C (in Hours)	% share of the day
		1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24				
North Bound Trains	Platform Number 1																									24	19	8	33 %
	Platform Number 2																									19	20	15	63 %
	Platform Number 3																									24	22	15	63 %
	Platform Number 4																									24	20	15	63 %
> LOS C		0%	0%	0%	18%	35%	57%	75%	80%	92%	92%	90%	75%	63%	85%	15%	63%	99%	63%	94%	72%	60%	50%	50%	50%				

EVALUATION FOR STRATEGY 1: Staggering of Trains Schedule

		Time (in Hours)																								Coach Capacity	No. of Trains operated per day	LOS above C (in Hours)	% share of the day	Improve ment
		1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24					
North Bound Trains	Platform Number 1																									24	19	7	29 %	4 %
	Platform Number 2																									19	22	14	58 %	5 %
	Platform Number 3																									24	22	15	63 %	0 %
	Platform Number 4																									24	18	13	55 %	8 %
> LOS C		6%	10%	10%	25%	42%	63%	50%	60%	58%	87%	90%	75%	63%	85%	15%	50%	82%	63%	75%	65%	70%	63%	30%	50%					

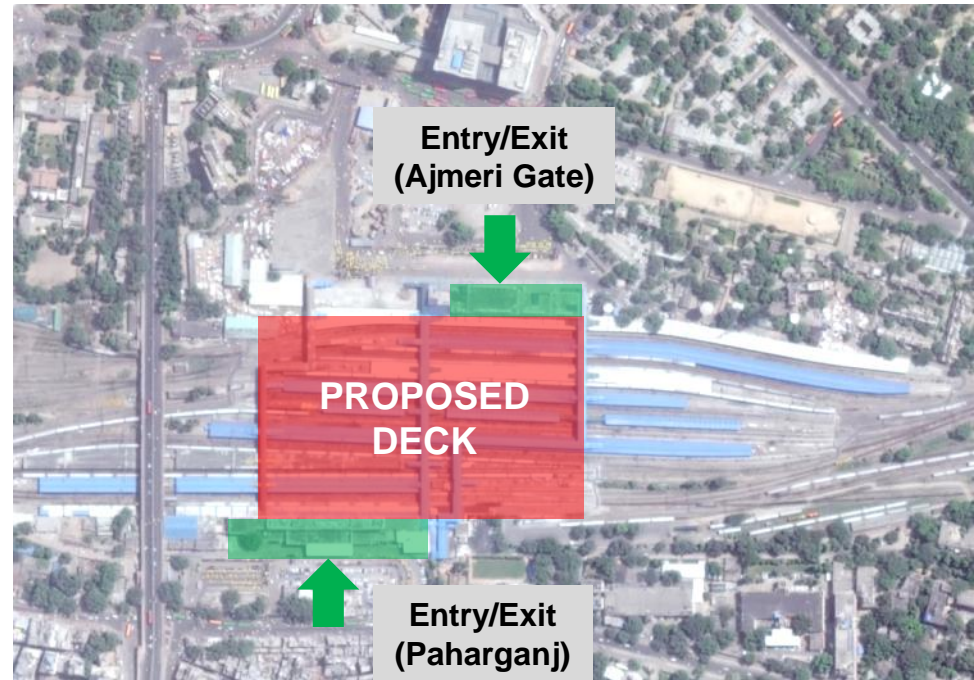

❖ 4 – 8 % Improvement in overall LOS

ALTERNATE STRATEGIES

STRATEGY 2 – CROWD MANAGEMENT (Short Term)

Crowd Management by creating
“Departing Lounge Deck”

- Deck above Track-side Peripheral Area (Platforms and Tracks), at the level of existing Foot-over-Bridge (FOB).
- Entry/exit at deck level with better facilities for access/dispersal.
- Shifting all platform facilities like Shops, utilities, etc. to Departing Lounge Deck.
- Increased passenger flow by providing escalators & elevators for vertical movements along with stairs.
- Access to Platforms only before 15 minutes of train departure.

Proposed Departing Lounge Deck

ALTERNATE STRATEGIES

STRATEGY 2 – CROWD MANAGEMENT (Short Term)

Calculations:

Total Area of Proposed Deck = 60,000 m²

Peak hour average entering volume = 18,400 Passengers.

Considering, 60% of entering volume is using deck at any particular time;

Area available per passenger = 5.45 m²

Norms & standards for Waiting Hall = 5 m² per passenger

{As per Unpublished SPA Thesis (Planning & Design of an Intercity Bus Terminal, Case Study: Sarai Kale Khan, New Delhi) by Hariharan, T.R. (1998)}

FAR Calculations:

Existing FAR of Station = 0.2

New FAR = 0.44

Permissible FAR = 1.0

Available access FAR can be utilized in for creating deck.

Proposed Departing Lounge Deck at First Floor Level (Above Platforms & Tracks)

Vertical Circulation to Connect Ground with Deck Level

Deck's Conceptual Section with Vertical Movement at Island Platform

ALTERNATE STRATEGIES

STRATEGY 2 – CROWD MANAGEMENT (Short Term)

Evaluation:

EXISTING Platform-wise LOS

Platform Number	Time (in Hours)																								Coach Capacity	No. of Trains operated per day	LOS above C (in Hours)	% share of the day
	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24

❖ 65 – 70 % Improvement in overall LOS

- ❑ INTRODUCTION
- ❑ METHODOLOGY
- ❑ LITERATURE REVIEW
- ❑ DATA BASE
- ❑ STUDY AREA
- ❑ NEW DELHI RAILWAY STATION CHARACTERISTICS
- ❑ LEVEL OF SERVICE ASSESSMENT
- ❑ ALTERNATE STRATEGIES FOR STATION PRODUCTIVITY IMPROVEMENT
- ❑ **SUMMING UP**

SUMMING UP

CONCLUSIONS

- I. Railway Stations are **important component** of transport system, However, there are **no benchmarks of productivity** for railway stations.
- II. Railway Stations in **India carry 16,500 pax/Ha** whereas **Europe carry 74,000 pax/Ha** on an avg.
- III. The existing status of station (New Delhi) show following character –

a) Dwell Time (Average)

- | | |
|-------------------------------------|--------------|
| i. Departing Passenger (Unreserved) | : 46 minutes |
| ii. Departing Passenger (Reserved) | : 37 minutes |
| iii. Arriving Passenger | : 14 minutes |

b) Level of Service (LOS)

- | | |
|-------------------|--|
| i. Platforms | : 25 – 75 % day-time LOS \geq D |
| ii. Walkway (FOB) | : D (Space – 2.1 m ² / pax) |
| iii. Staircase | : D (Space – 0.9 m ² / pax) |
| iv. Escalators | : C (Space – 1.3 m ² / pax) |

c) Performance of Side and Island Platforms

- | | |
|------------------------------------|-----------------------------------|
| i. Average LOS of Side Platform | : 25 – 33 % day-time LOS \geq D |
| ii. Average LOS of Island Platform | : 50 – 75 % day-time LOS \geq D |

d) Critical Time of Platforms overall LOS

- | | |
|-------------|-----------------------------|
| i. Morning | : LOS \geq D at 6am – 7am |
| ii. Evening | : LOS \geq D at 5pm – 6pm |

SUMMING UP

CONCLUSIONS

IV. Issues affecting Productivity

- a) **Loss of efficiency** of platforms due to mixed use as passenger amenities like shops, utilities, waiting areas etc. are provided on platforms itself.
- b) Absence of adequate hold-up areas for **crowd** management.
- c) Island Platforms have lesser space as compare to side platform, and more roles.
- d) **Luggage** is carried in very large amount by passengers (**1 bag per Person**).
- e) **75% passengers** are reaching station before **20-30 min.** of their train departure time.
- f) **Weak enforcement**, passengers use staircases and Platforms as resting place.

V. Alternate **Scenarios** for productivity improvements

- a) **STAGGERING OF TRAIN SCHEDULE** has potential of improving performance from –
 - i. Platforms : 4 – 8 % Improvement in LOS
 - ii. Walkway (FOB) : LOS D can be lifted to LOS C for particular time Duration
 - iii. Staircase : LOS D can be lifted to LOS C for particular time Duration
 - iv. Escalators : LOS C can be maintained easily
- b) **CROWD MANAGEMENT by Creating Departure Lounge Deck** can improve performance from –
 - i. Platforms : 65 – 70 % Improvement in LOS
 - ii. Walkway (FOB) : LOS D can be lifted to LOS C for most of the time in a day
 - iii. Staircase : LOS D can be lifted to LOS C for most of the time in a day
 - iv. Escalators : LOS C can be maintained easily

SUMMING UP

RECOMMENDATIONS

I. Productivity Improvements

- a) **Immediate Action** : Staggering of Train Schedule
- b) **Short Term** : Setting up of departure lounge deck
- c) **Medium Term** : Creating directional terminal for destined trains
 - North Direction : Holambi Kalan Railway Station
 - East Direction : Anand Vihar Railway Station
 - South Direction : Hazrat Nizamuddin Railway Station
 - West Direction : Bijwasan Railway Station

➤ **Operation of only passing trains from New Delhi Railway Station**

From SPA Study, 2013:

Percentage split of passengers commuting by arriving, departing and passing trains at New Delhi Railway Station are as follows:

- Arrival Train Passengers : 26 %
- Departing Train Passengers : 27 %
- Passing Train Passengers : 47 %

Thus, as per present daily footfalls i.e. 482,800 users

- **Passing Train Users : 2,26,916 passengers (47% of existing)**

Remaining **2,55,884 (53%)** passengers using arriving & departing trains can be easily **shifted to proposed directional railway terminals** as they are under utilized.

SUMMING UP

RECOMMENDATIONS

- II. **City-side transport should get focus** –
 - a. **Public Transport integration**, night services should also be provided.
 - b. Parking Facilities – should have special norms.
 - **Multi-level parking** is the need of major railway stations like New Delhi.
- III. **Increased enforcement** for unmanaged spaces like stairs, walkways, platforms etc.
- IV. **Maximum use of Air space** to achieve maximum FAR for better **convenience of user & economical use of space** by developing commercial or mixed-use development in association with the development of the station based on PPP.

THANK YOU
