

SUSTAINABLE PPP IN BUS TRANSPORT

PPP PROJECT MANAGEMENT PRACTICES

C. K. GOYAL

SENIOR VICE PRESIDENT

**DELHI INTEGRATED MULTI MODAL TRANSIT
SYSTEM (DIMTS) LTD.**

A JV OF GOVERNMENT OF NATIONAL CAPITAL TERRITORY OF
DELHI & IDFC FOUNDATION

Reform Journey of Public Transport in Delhi

31.03.2001:

- Entire City Fleet steadily converted to CNG

(Hon'ble SC Orders in case of M. C. Mehta & Ors)

- F.Y. 2007-2008: Revamping of Private bus operation under Public- Private Partnership Model (PPP) - 50% Fleet

Current Plan:

- Introduction of **Pure Electric Buses** in Delhi
- Implementation of **PTx2 Strategy** for doubling the market share of public transport with target fleet of 11000 Buses

Bus will continue to be the **Principal Mode** of public transport system in Delhi due to flexibility, low cost etc.

Requirement of Buses/Case Study of Delhi

Level of service	Year	Population in lakh	Extent of Supply Availability of Public Transport-Per 1000 Person (MoHUA)	No. of Buses required for Delhi	Remarks
At Present	2022	207.45		7,320	Level III- 0.35
I	2022	207.45	≥ 0.6	>12447	
II	2022	207.45	0.4-0.6	8,298-12,447	
III	2022	207.45	0.2-0.4	4,149 -8,298	
IV	2022	207.45	<0.2	2,074-4,149	

Growth of Electric Buses in Delhi under GCC Model

**CURRENT FLEET STATUS IN
F.Y. 2022-23**

- **DTC** 3760 CNG
250 Electric
- **Cluster** 3319 CNG

**Fleet status in
F.Y. 2024-25**

- **DTC** 5240 Electric
260 Electric (Option Clause)
- **Cluster** 5240 [3040 Electric+2200 CNG]
260 Electric (Option Clause)

4% to 80%

Objective

To optimize the **efficiency** of City bus transport services with **improved processes** in rapidly growing Indian cities for a Sustainable transport and better environment which make cities liveable.

Performance improvement of City Bus Transport leads to:

- Modernisation of Transport system by making scientific decision making using of technology and **data analytics**
- Improving economic & financial efficiency
- Improved **user satisfaction**
- Improving **monitoring system** and capacity building

Project Structure: Need for GCC (Opex Model) in Buses

- The project structure must mirror the technical and operational challenges.
- **Vehicle specifications:** Specifications can be functional or more technical. In GCC contracting option, the focus is on a functional specification which gives following advantages to the Authority:

Functional specifications provide **more flexibility** for the manufacturers.

Functional specifications leave the technical responsibility completely with the manufacturers.

- Transfer of complete **operating risk** on the Operator.

OPEX MODEL -Key considerations for Sustainable PPP

- Bundling/ Aggregation of demand both for augmentation and in lieu of **retiring fleet** in next three years to get economy of scale
- Facilities provided by Authorities- **Depot infra with upstream power infra** with sanctioned power load provided by Authority in depot
- Concession Period-**12 years**
- **Assured kilometerage (urban bus)** @ 70,000 per bus per annum
- Commitment of amount of upfront capital subsidy (Demand Incentive) at parity with FAME-2 Scheme of DHI by state Govt.
- Payment Security Mechanism with provision of Escrow Account
- Annual Revision of Fees based on index value for **manpower cost and other consumables. Electricity at actual tariff of state with cap based on efficiency criteria**

E-Bus Specs for Integrated Technology Solution: Driving range on single charge

- Shift changeover window of **60 minutes in depot/ terminal** versus 20/ 30 minutes.
- Operational Requirement: Minimum **200kms/ bus/ day** autonomy on single charge to have operational flexibility and lower operating cost.

Key for induction of EVs is
Charging Infrastructure

Use of Technology in Cluster Buses in Delhi

**Contactless
Ticketing
through
Chartr App**

GPS Device

- Vehicle Utilization Report
- Vehicle Trip Detail
- Missed Bus Stops
- Vehicle Bunching Report
- Route Deviation Report
- Overspeed Report
- Idle Report
- Panic Alert /Panic Button Report etc.

CCTV

- Live View status .
- Depot wise Online & Off line status.
- Inside Vehicle Observation through CCTV

AFCS

- Passenger Profiling with Origin & Destination
- Passenger Profiling Route wise & Bus wise
- ETM Revenue Details
- Shift Details/Trip Details
- Earning Statement
- Route & Bus Wise Earning
- DMRC Earning

Upgradation based NCMC Compliant Digital Tickets Solutions in pipeline

Responsibility of Authority towards Management of Cluster Buses under GCC Model

PLANNING AND SCHEDULING

- Selection of Route
- Time Tabling with differential scheduling
- Demand based optimization

ENSURING COMPLIANCE

- Standards and Technical specifications
- SLAs
- Drivers empanelment

SERVICE-TRIP
VALIDATION

PERFORMANCE
ADJUSTMENTS.

**PAYMENT TO
Concessionaire
with audit trail**

MONITORING

- Timely departures
- Bunching of buses of the same route plying in the same direction.
- Route deviation
- Driver quality/ performance Monitoring.
- Incident/Accident Management.

REALTIME DATA

- ETA, seat availability, details of route and time table
- App based

**To manage Govt.
receipts/
expenditure in the
designated account**

Key Performance Parameters – Monitoring mechanism

Bus quality & presentability: Daily Checking of **100% buses** at depot gate.

Operational aspects: Overspeeding, Bunching, Route deviation, service gaps during peak hour and peak direction on trunk and primary routes.

Service Trip Validation: using trip wise mapped GPS data and trip-wise revenue data on web based Application Software (BMS Application) with evidence mapping/ audit trail.

Additional checks: Trip departures as per Unified Time Table (**zero tolerance** for early departure), Stoppage at designated bus stops, Route adherence, Actual service kms as per GPS.

*Payment processing using ERP Software without **any human intervention***

Bus Management System (BMS)

The service trip-wise integrated feed of GPS based AVLS System and AFCS System- primary input to BMS Application based on auto captured data

Concession Management – Process

Real Time Information for the Commuter

The screenshot shows the 'NextBus Delhi' website. At the top is the DIMTS logo with the tagline 'We help people move'. Below is a navigation bar with links: HOME, ROUTE DETAIL, ETA, TRIP PLANNER, SCHEDULE, SEARCH BUS STOP, and TRACK. The main content area is divided into several sections:

- Route Details:** Includes a search box for 'Enter Bus Route No.' with a 'FIND' button and a description: 'Get the list of bus stops on a route'.
- Bus Schedule:** Includes a search box for 'Enter Bus Route No.' with a 'FIND' button and a description: 'Get tentative schedule for buses on a route'.
- Track Location of a Bus:** Includes a search box for 'Enter Bus Route No.' with a 'FIND' button and a description: 'Track the location of the bus on map'.
- Estimated Time of Arrival (ETA):** Includes a description: 'Find Estimated Time of Arrival of bus based on real time information' and three links: 'By Route', 'By Bus Stop on a Route', and 'By Bus Stop'.
- Search Bus Stop:** Includes a search box for 'Enter Locality' with a 'FIND' button and a description: 'Locate bus stops near a locality'.
- Trip Planner:** Includes search boxes for 'Enter Origin' and 'Enter Destination' with a 'FIND' button and a description: 'Find all possible bus routes between source and destination'.

At the bottom, it says 'Developed and Maintained by DIMTS' and 'FEEDBACK DISCLAIMER FAQ'. A note at the bottom right says 'Best Viewed in Chrome, FireFox4+, Safari & IE8+'.

Approach for Planning & Procurement of EVs by PTAs/ STUs

- Assessment of requirement of EVs (e-Buses) in next 3 years with e-Bus type/ size.
- Earmarking depot(s)/ depot (s) space for e-Bus Depots with capacity.
- Feasibility Assessment of power load with cost and timelines with Discoms.
- Selection of Routes.
- Mapping of routes with depot based on least dead mileage.
- Decision on operating model (Capex, Opex-wet lease/ dry lease).
- Provision of capital funds for construction of depot with power load infra & capital subsidy.

THANK YOU!
