

# Choice modelling-based policy evaluation for gender-inclusive mobility

15<sup>th</sup> Urban Mobility India Symposium

UMI RS - paper id 10

Authors

Dr. Ubaid Illahi, Dr. Gayathri Harihara Subramanian, Prof. Ashish Verma

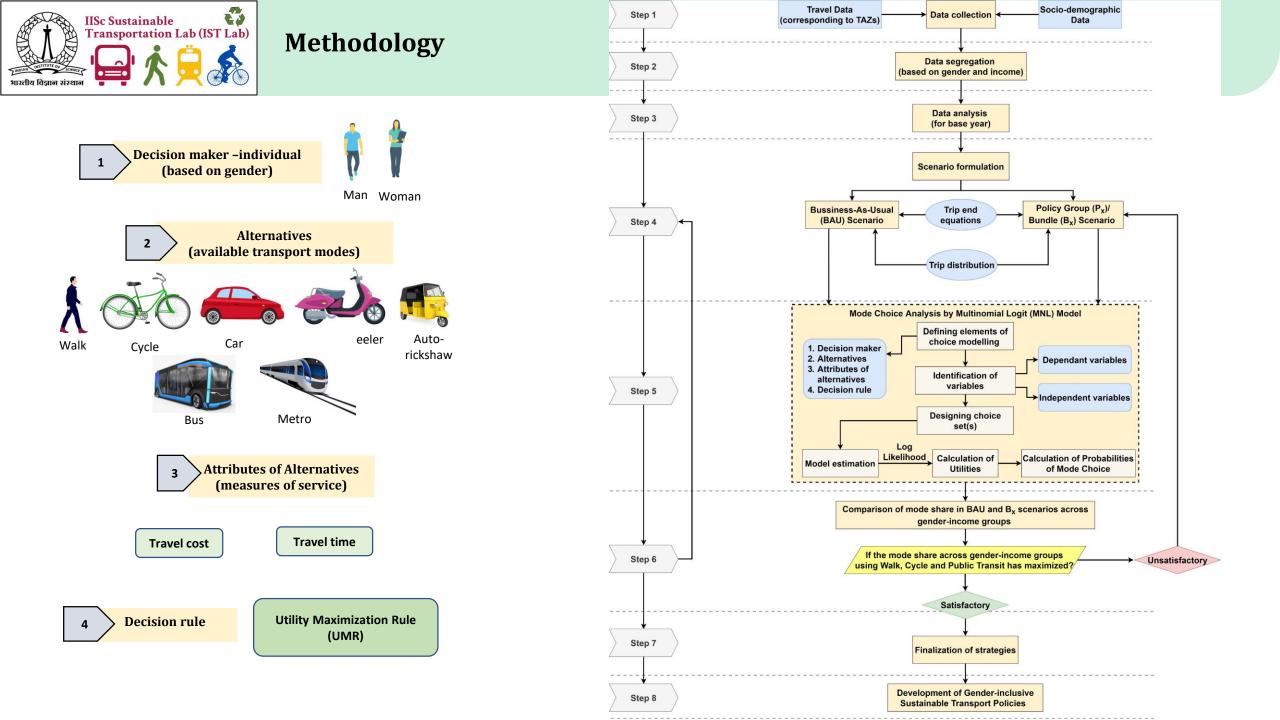

IISc Sustainable Transportation Lab Department of Civil Engineering Indian Institute of Science, Bangalore

- **Men** and **women** have **different transportation needs** due to the difference in their **daily activity-travel patterns** and the **associated factors**.
- **Convergence** in **mode choice** due to:
  - Women's increasing labour force participation
  - **Decline** in the normative **male-breadwinner-female-housewife** model
  - Increasing licensing and car ownership among women
- **PT** and **NMT not** being the **preferred** modes
- Mode choice behavior affects sustainability

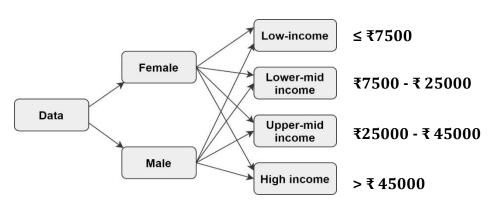

- 1. To **develop** a **mode choice model** using the RP-SP survey data set.
- 2. To **explore, identify,** and **test** the impact of **transport policy bundles** (consisting of policy instruments) on the modal split across men and women.
- To test and analyze the impact of identified policy bundles across the gender-income groups.

#### Variables

Variable category	Notation	Variable	
Decision-maker	<i>x</i> <sub>11</sub>	Age (16 to 58 years)	
	<i>x</i> <sub>12</sub>	Gender (Male = 0, Female = 1)	
	<i>x</i> <sub>13</sub>	Income (Low, Lower-mid, Upper-mid and High)	
Mode (dependent)	C <sub>ALT</sub>	Alternative (mode) chosen from the choice set	
Attributes of alternatives	x <sub>CTT</sub>	Travel Time using Car	
	x <sub>BTT</sub>	Travel Time using Bus	
	x <sub>WKB</sub>	Walking time to bus (PT)	
	x <sub>WTB</sub>	Waiting time (PT)	
	x <sub>ITB</sub>	Interchange time (PT)	
	<i>x<sub>TWTT</sub></i>	Travel Time using Two-Wheeler	
	x <sub>ATT</sub>	Travel Time using Auto	
	x <sub>CYT</sub>	Travel Time using Bicycle (NMT)	

$x_{WT}$	Walking Time (NMT)			
<i>x<sub>MTT</sub></i>	Travel time using Metro (PT)			
x <sub>CTC</sub>	Travel Cost using Car			
x <sub>BTC</sub>	Travel Cost using Bus (PT)			
<i>x<sub>TWTC</sub></i>	Travel Cost using Two-Wheeler			
<i>x<sub>ATC</sub></i>	Travel Cost using Auto			
<i>x<sub>MTC</sub></i>	Travel Cost using Metro (PT)			

#### **Mathematical formulation**

The utility of an individual i choosing the mode m is given by the following expression:

$$U_{im} = V_{im} + \varepsilon_{im}$$

#### **Utility equations:**

$$\begin{aligned} V_{i,CAR} &= \alpha_{CA} + \beta_{TT} * x_{CTT} + \beta_{TC} * x_{CTC} + \beta_{1,CA} * x_{11} + \beta_{2,CA} * x_{12} + \beta_{3,CA} * x_{13} \\ V_{i,TW} &= \alpha_{TW} + \beta_{TT} * x_{TWTT} + \beta_{TC} * x_{TWTC} + \beta_{1,TW} * x_{11} + \beta_{2,TW} * x_{12} + \beta_{3,TW} * x_{13} \\ V_{i,AUTO} &= \alpha_{AU} + \beta_{TT} * x_{ATT} + \beta_{TC} * x_{ATC} + \beta_{1,AU} * x_{11} + \beta_{2,AU} * x_{12} + \beta_{3,AU} * x_{13} \\ V_{i,CYCLE} &= \alpha_{CY} + \beta_{TT} * x_{CYT} + \beta_{1,CY} * x_{11} + \beta_{2,CY} * x_{12} + \beta_{3,CY} * x_{13} \\ V_{i,WALK} &= \alpha_{WA} + \beta_{TT} * x_{WT} + \beta_{1,WA} * x_{11} + \beta_{2,WA} * x_{12} + \beta_{3,WA} * x_{13} \\ V_{i,BUS} &= \alpha_{BU} + \beta_{TT} * x_{BTT} + \beta_{TC} * x_{BTC} + \beta_{1,BU} * x_{11} + \beta_{2,BU} * x_{12} + \beta_{3,BU} * x_{13} + \beta_{WK} * x_{WKB} + \beta_{WT} * x_{WTB} + \beta_{IT} * x_{ITB} \\ V_{i,METRO} &= \alpha_{ME} + \beta_{TT} * x_{MTT} + \beta_{TC} * x_{MTC} + \beta_{1,ME} * x_{11} + \beta_{2,ME} * x_{12} + \beta_{3,ME} * x_{13} \\ \text{The probability of an individual } i \text{ choosing the mode } m \text{ is given by the following expression:} \qquad P_{im} = \frac{e^{V_{im}}}{\sum_{q \in C_m} e^{V_{iq}}} \end{aligned}$$

The probability of an individual *i* choosing the mode *m* is given by the following expression:

The probability of a mode m, which is obtained by the following expression:

$$P_m = \sum_{i=1}^n P_{im}$$

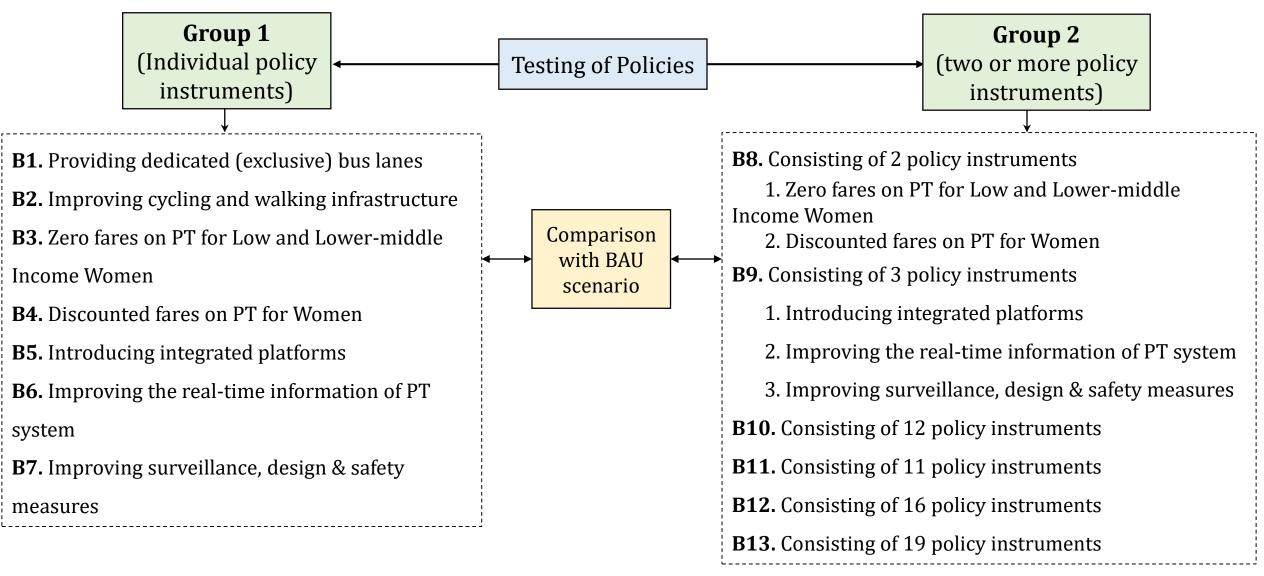

## **Estimated parameters**

Parameter	Estimate	t-ratio	Parameter	Estimate	t-ratio	
$\alpha_{CA}$	0 (fixed)	NA	$\beta_{2,CA}$	0	NA	
$lpha_{TW}$	6.508	7.656	$\beta_{2,TW}$	-3.710	-8.032

# Modal Split Results Across Gender Groups

OlifiegeoinPoliconBde dhearon (Mygrab Spirit) with respect to BAU scenario

Group-1

## Modal Split Results Across *Gender* Groups

B<sub>x</sub>-BAU (MALES) **Children in the payde share** (Beneficied) with respect to BAU scenario Split 🛙 B8-BAU 🛯 B9-BAU B10-BAU ⊠ B11-BAU B12-BAU B13-BAU 5.785 4.949 4.146 4.69 2.438 1.840 3 1.166 0.921 0.102 0.000 0.000 0.000 0.000 0.000 30.963 30.963 D -0.068 0.000 0.000 0.000 <u>XXXXX</u> 0.000 -0.034 Э 2.846 2.846 -5.311 -5.612 -6.789 .223 00 METRO PRIVATE AUTO NMT РТ **B<sub>x</sub>-BAU (FEMALES)** ■ B8-BAU ■ B9-BAU ■ B10-BAU ■ B11-BAU ■ B12-BAU B13-BAU 3.036 œ 2.73 2.296 2.176 2.096 1.883 1.454 1.176 1.283 1.014 35.775 35.775 0.230 Š N ğ -0.868 🔽 331 222220 -0.210 -0.223 -2.221 🖾 -0.375 -1.276 📉 -0.850 -2.274 📉 -1.251 3.871 3.757 -1.793 -1.881 2.828 METRO AUTO PRIVATE NMT PΤ

Group-2

- Low-income as well as lower-mid income females have a significantly higher mode share of PT (bus and metro) and walk mode, compared to males.
- Surprisingly, a good proportion of upper-income males have been found to use the metro.
- To attract more users to PT and NMT modes, **policymakers need to think beyond affordability** as there is a risk of people shifting to unsustainable modes if their income levels improve.
- Females are more concerned about the safety and comfort which attracts them to use a car, provided there are no economic constraints. Contrarily, males are more concerned about the reliability of the mode.

## Analysis of the results (B1-B9)

Bundle	Desired shift in mode	Male	Female
B1: Providing dedicated (exclusive) bus lanes	Bus	+1.62%	+1.67%
B2: Improving cycling and walking infrastructure	NMT Walk Cycle	+0.9% +0.63% <b>+0.26%</b>	+ <b>1.57%</b> + <b>1.36%</b> +0.17%
<b>B3.</b> Zero fares on PT for Low and Lower-middle Income Women	PT	0.00%	+1.25%*
B4. Discounted fares on PT for Women	PT	0.00%	+0.10%*
<ul><li>B5. Introducing integrated platforms</li><li>B6. Improving the real-time information of PT system</li></ul>	PT	+0.10%	+0.12%
B7. Improving surveillance, design & safety measures	NMT	+0.34%	+0.55%
B8	РТ	0.00	+1.28%
В9	Car NMT PT	-0.068% -0.034% +0.102%	-0.868% +1.014% +0.230%

The results from Bundle 10 to Bundle 13 can be summed as follows:

- **Bundle 13** showed the **best** results i.e. **max. reduction** in **car**, **two-wheeler** and **auto** modes as well as **max. increase** in **PT** (bus and metro) and **NMT** (walk and cycle) modes.
- Mode share reduced **more for females** than males in the following:
  - ✓ Car: **F (-2.644%)** and M (-2.059%)
  - ✓ Auto: F (-1.881%) and M (0.000%)
  - ✓ Walk: **F (+1.508)** and M (+1.336)
- Mode share increased **more for males** than females in the following:
  - ✓ Two-wheeler: M (-6.164%) and F (-0.687%)
  - ✓ Cycle: M (+1.102%) and F(+0.668%)
  - ✓ Bus: **M(+3.298%)** and F (+1.583%)
  - ✓ Metro: M(+2.486) and F (+1.454%)

However, the mode share of bus (in B13) for females is **35.775%** which is more than that of males (30.963%).

## **Conclusions and Policy implications**

- 1. The policies in **B1 to B7** demonstrated that **females** are likely to shift more towards **PT and NMT modes**; however, the shift could be undesirable also if it does not target all the modes.
- 2. **B10 to B13** demonstrated the **benefit** of using **combination of policy instruments**. Using these, policymakers can target all the modes and improve the overall modal split.
- 3. Among the NMT modes, **females** are more likely to **walk** while the **males** are more likely to **cycle**.
- 4. Considering the **cost subsidies** in the PT, **women** are more likely to use **metro over bus**.
- 5. Among the private modes, **two-wheeler** is a preferred mode for **males** while **females** prefer **car**.
- 6. Among the public modes, **mode share of bus** is more for **females**.
- 7. Low-income as well as lower-mid income females have a significantly higher mode share of PT (bus and metro) and walk mode.
- 8. Two-wheeler is a preferred mode for males across lower, lower-mid, and even upper-mid income groups.
- 9. The mode share of **car** is observed to be **higher for females** across **upper-mid** and **high income** groups.
- 10. The study would be beneficial for policymakers to target a specific gender or specific issue or a combination of issues to make the modal split equitable.

Making Living Sustainable

Thank you
